

Escharotomy

1 Significant findings include: numbness/tingling distal to injury, loss of motor function or sensation, cyanosis of extremity, pain (deep, aching, throbbing), decrease or absence of distal pulses.
2 This is not a benign procedure. If it must be undertaken it would be optimal to consult with the burn surgeon.

ESCHAROTOMY

* see Diagram on Back

- Cut along the dotted line, identifying and avoiding named structures
- Release both sides of limbs and all of chest

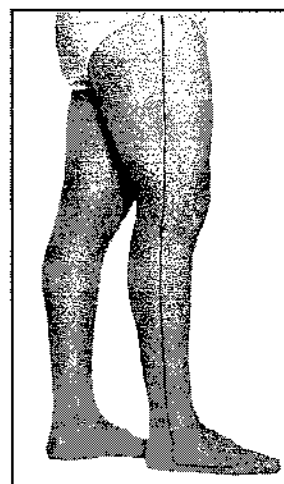

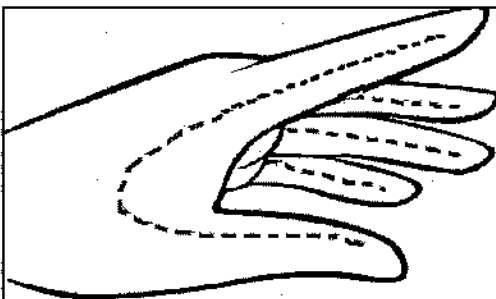

Diagram modified by National Burn Service
